

Dynamics on blogs network

Intertemporal topic correlations in weblogs and news websites

Jean-Philippe Cointet*, Camille Roth**, Emmanuel Faure*

Social System in vivo

French political blogosphere

- In the context of the french presidential elections,
- stigmergic media,
- relatively autonomous system.

Social System in vivo

French political blogosphere

- In the context of the french presidential elections,
- stigmergic media,
- relatively autonomous system.

Data collection

- a socio-semantic network,
- retrieve the system dynamics,
- by adopting the blogger viewpoint.

Dataset collection

Snowball

- 1 from a given seed "http://versac.net",
- 2 we follow its blogroll links,
- 3 and select every active political blogs,
- 4 repeat the process.

The selection

- 123 blogs
- crawled over 5 months, from 1/01 to 31/05

The dataset

Structure

Three kinds of links:

- blogroll
- post
- comments

The dataset

Structure

Three kinds of links:

- blogroll
- post
- comments

The dataset

Structure

Three kinds of links:

- blogroll
- post
- comments

Semantics

the content of each post is collected and indexed with classical linguistic treatments.

Dynamical features

Structure

posts and comments are dated, thus providing a dynamical network.

Dynamical features

Structure

posts and comments are dated, thus providing a dynamical network.

Semantics

- posting activity evolution

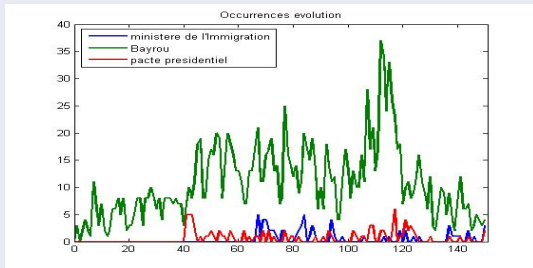

Dynamical features

Structure

posts and comments are dated, thus providing a dynamical network.

Semantics

- posting activity evolution
- thematic occurrences evolution

Context

Intertemporal correlations

- We are interested in **generalized** patterns of **intertemporal** topic **correlations** between various **information sources**

Global, macro-level viewpoint

We try to infer causal relationship between sources by creating a map of systematic topic correlations

occurrences of the topic "ministère de l'immigration" for UMP blogs (blue), PS (pink), UDF (black)

Causal-states model

A symbolic dynamics...

blogs α	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1
blogs β	0	0	1	1	0	0	1	1	0	0	1	1	0	0	1	1
blogs γ	0	0	0	0	1	1	1	1	0	0	0	0	1	1	1	1
press	0	0	0	0	0	0	0	0	1	1	1	1	1	1	1	1
alphabet	a	b	c	d	e	f	g	h	A	B	C	D	E	F	G	H

symbolic dynamics | ...A H H f **d** **c** **a** e F f b c b d e

Causal-states models

Causal-state machine

(Crutchfield & Young, 1989; Shalizi, 2001)

- automatically inferring (variable-length) hidden states...
- ...made of equivalence classes of signal histories...
- ...along with transition probabilities.

Causal-states models

Causal-state machine

(Crutchfield & Young, 1989; Shalizi, 2001)

- ...made of equivalence classes of signal histories...
- ...along with transition probabilities.

signal | A H H a a a h H H a a a A H H...

Data

Hand-made selection

- Sample of 33 very active political blogs, 6 press sources.
- Daily collection of posts during November 2006: presidential primary for the French *Parti Socialiste* (center-left).
- Selection of 75 (lemmatized) terms — this set makes our “topics”.

Data

Hand-made selection

- Sample of 33 very active political blogs, 6 press sources.
- Daily collection of posts during November 2006: presidential primary for the French *Parti Socialiste* (center-left).
- Selection of 75 (lemmatized) terms — this set makes our “topics”.

Practical matters

Creation of blog groups

Classical [Salton \(1975\)](#) categorization

Three groups: α , β , γ , plus the press

Roughly left-, right-, indep.-leaning (α , β , γ)

Practical matters

Creation of blog groups

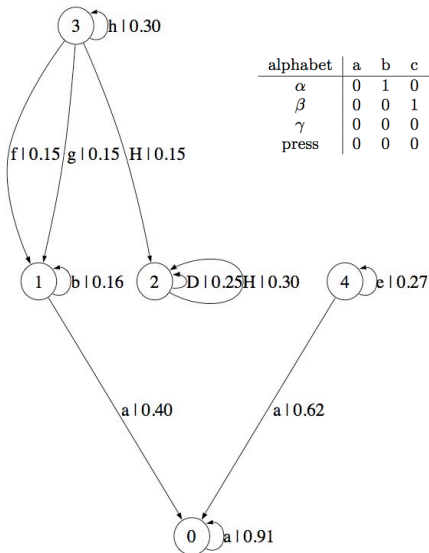

Classical [Salton \(1975\)](#) categorization
Three groups: α , β , γ , plus the press
Roughly left-, right-, indep.-leaning (α , β , γ)

Signal creation

For each term: evolution of occurrences in each blog group transformed into a signal vector.
